## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 18 January 2007 has been entered.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Drawings***

3. The drawings were received on 18 January 2007. These drawings are acceptable.

### ***Double Patenting***

4. Claims 23-36 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 18-26 of copending Application No. 10/325,443. Although the conflicting claims are not identical, they are not patentably distinct from each other because the inventions of instant claims 23-36 represent a genus of which the inventions described by claims 18-26 of copending Application No. 10/325,443 are species. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993). The instant claims require the

Art Unit: 1773

multi-functional monomer to comprise an acrylate or ammonium compound, while copending Application No. 10/325,443 claims specific acrylates and ammonium compounds as the multi-functional monomer. These specific acrylates and ammonium compounds represent species of the genus recited in instant claim 23.

While this is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been issued, it is noted that Application No. 10/325,443 has been allowed.

#### ***Remarks***

5. The rejections over Michal et al. have been withdrawn in view of the applicants' amendment to claim 23 requiring the coating to comprise a quaternary amine acrylate hydrogel polymer. The examiner agrees with the applicants that Michal et al. neither teach nor fairly suggest the use of a hydrogel coating.
